

MS ZAMA POS Lite

USER MANUAL - VERSION 1.0

OFFLINE BILLING	GST SUPPORT	HOLD & RESUME
REPORTS & CSV	BACKUP & RESTORE	A4 / 58 mm / 80 mm

Simple, practical billing for cafes and small businesses.

Developed by MS ZAMA Dynamics

Product Documentation

1. Quick Start

MS ZAMA POS Lite is designed for straightforward day-to-day billing. It manages products, GST-based invoices, held orders, bill history, reports, CSV exports, backups and multiple print formats.

Recommended first-time sequence

1	Open Settings and enter your business information.
2	Choose the required print format: A4, 58 mm Thermal or 80 mm Thermal.
3	Add your products with selling price, cost price, GST and category.
4	Open Billing, add products and generate a test invoice.
5	Create an initial backup after completing setup.

Important: The app stores operational data locally. Export backups regularly and keep a copy outside the device running the POS.

2. Business Setup

Open Settings before regular use. These details appear on invoices and receipts.

Setting	Purpose
Cafe / Business Name	Name displayed on the invoice.
Invoice Prefix	Short prefix used in invoice numbers, for example HC.
GSTIN	GST identification number displayed on invoices/receipts.
Phone	Business contact number.
Address	Business address displayed on the invoice.
Print Format	A4, 58 mm Thermal or 80 mm Thermal.

Select Save Settings after making changes.

3. Product Management

Add: Enter product name, selling price, cost price, GST and category, then save the product.

Edit: Use Edit beside an existing product, make changes and save.

Delete: Use Delete and confirm when the product is no longer required.

Search: Use product search to quickly locate an item.

4. Creating a Bill

1	Open the Billing section.
2	Select a product and enter the required quantity.
3	Add it to the bill. Repeat for additional products.
4	Adjust quantity or remove an item if required.
5	Enter customer name and phone when available. A blank customer name is treated as a Walk-in Customer.
6	Choose the payment method.
7	Select Generate Bill and review the invoice.
8	Print the invoice if required.

New Bill: Use New Bill when you want to clear the active billing screen and start another order.

5. Hold, Resume and Delete Held Bills

Hold Bills are useful when a customer has not finished ordering or another customer must be billed first.

Hold Bill

Build the order normally and select Hold Bill. The current items and customer information are saved, and the active billing screen is cleared.

Resume Bill

In Held Bills, select Resume. The saved order returns to the active billing screen and is removed from the Held Bills list. If the customer still needs more time, use Hold Bill again.

Delete Held Bill

Select Delete and confirm. Use this only when the held order is no longer required.

Persistence: Held bills are stored locally so they can remain available after the app is refreshed or reopened.

6. Printing

Format	Recommended use
A4	Standard desktop/office printer or PDF.
58 mm Thermal	Compact thermal receipt printer.
80 mm Thermal	Wider thermal receipt printer.

Choose the print format in Settings before printing. In the browser/system print window, also select the matching printer and paper size where available.

Thermal printer note: Exact margins and cutting behavior vary by printer model and driver. Always test one receipt when configuring a new printer.

7. Bill History and Reprinting

Generated bills are stored in Bill History. Use this section to review previous bills and reprint an invoice when required. A bill record can also be deleted when appropriate.

Before reprinting, confirm that the required print format is selected in Settings.

8. Dashboard and Reports

The Dashboard and Reports sections provide a quick view of recorded business activity. Use them to review sales information and other report values available in the application.

Always verify report values before using them for accounting, tax filing or business decisions.

9. CSV Export

CSV export creates a spreadsheet-friendly file containing report data. The file can be opened in Microsoft Excel or another compatible spreadsheet application.

1	Open the relevant Reports section.
2	Choose the available CSV export option.
3	Save the file to the required location.
4	Open the CSV and verify the exported values.

10. Backup and Restore

Because the application uses local data storage, regular backups are strongly recommended.

Export Backup

Open Settings and select Export Backup. Save the generated JSON backup file in a safe location, preferably outside the device running the POS.

Import Backup

Open Settings, select Import Backup, choose a valid backup file and complete the restore. The app may reload after restoration.

Recommended: Create a backup before clearing browser/app data, changing devices or installing a major update.

11. Installation and Offline Use

MS ZAMA POS Lite is designed as an installable Progressive Web App (PWA). When supported by the browser/device, use Install App, Add to Home Screen or the browser's install icon.

After the required app files have been cached, core functions are designed to remain usable offline. Internet access may still be required for initial access, installation or updates.

Do not clear browser/site storage without first creating a current backup.

12. Data Safety

Good practice	Why it matters
Create regular backups	Protects against accidental local-data loss.
Keep a backup outside the POS device	Helps if the device is damaged, reset or replaced.
Test restore occasionally	Confirms that the backup can be used when needed.
Avoid clearing site/app data	Local POS records may be stored there.
Test after changing printers	Confirms receipt size and margins before live billing.

13. Troubleshooting

Problem	What to check
Invoice does not print	Generate the bill first. Confirm printer/destination and paper size in the print dialog.
Thermal receipt looks wrong	Confirm 58 mm or 80 mm in Settings and choose the matching printer/paper size.
Held bill appears missing	Confirm the order was placed on Hold. If local data was cleared, use a suitable backup if available.
Products or bills are missing	Check whether a different browser, browser profile or device is being used.
App shows an older version	Close/reopen or refresh the app after an update. Offline caching can temporarily retain older files.

14. Frequently Asked Questions

Does it require internet for everyday billing?

It is designed for offline-capable operation after the app has been installed/cached.

Can I use a thermal printer?

Yes. The app includes 58 mm and 80 mm receipt formats. Test compatibility with the actual printer and driver.

Can I keep an unfinished order?

Yes. Use Hold Bill, then Resume when the customer is ready.

Can I move my data to another device?

Create an Export Backup first, then use Import Backup on the target installation where supported.

15. Support and Version Information

Product: MS ZAMA POS Lite

Version: 1.0

Developer: MS ZAMA Dynamics
